PROFESSIONAL SUMMARY

Detail-oriented IT undergraduate with a strong interest in Software Quality Assurance and testing. Familiar with SDLC, STLC, manual testing, test case design, defect reporting, and REST API testing using Postman. Experienced in testing academic and personal web applications, including a multi-role marketplace platform, and documenting defects using structured bug reports. Currently learning Selenium automation testing and seeking an opportunity to grow as a QA professional.

TECHNICAL SKILLS

Testing: Manual Testing, Test Case Design, Bug Reporting, Regression Testing, Exploratory Testing, Test Documentation, Test Reports, Defect Tracking

Automation: Selenium WebDriver (learning), Pytest

API Testing: Postman — REST API testing, request/response validation, collection-level auth, API chaining

Bug Tracking: JIRA (basic), GitHub Issues

Concepts: SDLC, STLC, Test Scenarios, Test Cases

Languages: Python, JavaScript, HTML, CSS

Frameworks: Django, pytest

Dev Tools: Git, GitHub, VS Code, Postman

QA TESTING PROJECTS

SewaConnect — Local Service Marketplace Platform (Final Year Project)

Django REST Framework, Vanilla JS | Manual Testing + API Testing + Test Documentation

- Designed and executed 60+ test cases across booking, provider auto-assignment, authentication, and profile management modules, covering positive, negative, and boundary scenarios.
- Manually tested the multi-factor auto-assignment booking algorithm (distance scoring, tie-breaking, sequential provider assignment) to verify correct provider selection and fallback behavior on rejection or timeout.
- Performed API testing on 40+ REST endpoints across 10+ modules using Postman — validated authentication (JWT), request/response schemas, status codes, and error handling.
- Identified and logged defects including serializer field mismatches, incorrect foreign-key relationships, and booking reassignment edge cases, using structured bug reports (Title, Steps, Expected, Actual, Severity).
- Conducted regression testing after each feature addition and verified data consistency across booking status transitions.
- Tested cross-browser rendering and mobile responsiveness of the vanilla JS frontend across major viewport sizes.

Restaurant Management System — QA Testing

Python, Django, Bootstrap, HTML/CSS | Manual Testing

- Performed manual functional testing of all core features: menu browsing, table booking, AI assistant, and contact form.
- Designed and executed 25+ test cases covering positive, negative, and boundary value scenarios.
- Identified and documented 8 bugs including form validation bypass and AI response failure on empty input — reported using structured bug report format (Title, Steps, Expected, Actual, Severity).
- Tested REST API endpoints using Postman — validated request/response structure, status codes, and error handling.
- Verified mobile responsiveness across viewport sizes using browser DevTools.

Grocery E-Commerce Interface — QA Testing

HTML, CSS, JavaScript | Manual Testing

- Tested dynamic cart functionality: add/remove items, price update, quantity change edge cases.
- Verified DOM manipulation behavior for zero-item cart, maximum quantity, and decimal price scenarios.
- Checked layout responsiveness and CSS structure for cross-device compatibility.

Personal Portfolio Website — Development & Testing

Python, Django, HTML, CSS | Live: prativathapa.com.np

- Developed full-stack portfolio with dynamic project views and a functional contact form.
- Self-tested all navigation, form submission, and layout features — documented findings and resolved before deployment.
- Optimized for mobile responsiveness and cross-browser compatibility.

EDUCATION

Bachelor in Information Technology (BIT) Aug 2023 – Present

Padmakanya Multiple Campus, Bagbazar, Kathmandu (Tribhuvan University)
